Commitment that **yields development**

Two years ago we were facing an unprecedented challenge: COVID-19 and all the social and economic consequences that arrived with the virus. As a company we decided to face and overcome the difficulties in the best manner possible, working together, and responsibly taking care of each other, making an extra effort with our individual job functions. En 2022 nuestro compromiso se mantiene y proyectamos, tanto en producción como en exportaciones, ubicarnos entre 30 y 31 millones de tons. Esto quiere decir que aportaríamos alrededor del 50% de la producción nacional de este año, que, se estima, se ubique entre 60 y 64 millones de tons.

Thanks to you and to our customers, and the support from the communities in our area of influence, today we have grown even stronger. After a difficult 2020, marked by a worldwide fall in coal prices, **in the year 2021 we were able to produce 28,889,000 tons of coal and export 31,545,000 tons to 21 countries, positioning the company for the sixth consecutive year as the country's main coal producer.**

We maintain our commitment in the year 2022, and are projecting between 30 and 31 million tons, for both production and exports. That would mean we would contribute around 50% of Colombia's production this year, estimated somewhere between 60 and 64 million tons.

Those numbers, which mean economic and social development for the country and its regions, are the result of the commitment and effort of every member of our team. In addition, each one of them has fully met the biosafety regulations stipulated within the organization for protecting life and health.

Our employees have also been diligent about receiving their vaccinations. Currently, more than 90% of our workers have received at least one dose of the COVID-19 vaccine, and we have made vaccination stations available for booster shots.

In addition to the achievements already described, we are also celebrating the first year of operation for our El Corozo Mine. **Opening this mine that covers an area of 9,454 hectares has helped maintain our production levels and the more than 10,000 direct jobs in our area of influence,** making a contribution to the sustainable development of Cesar and Magdalena.

Social well-being is and will continue to be one of our main objectives. **In 2021, we generated US$368,2 million (Col$1,4 trillion) in royalties and US$275,1 million (Col$1,1 trillion) in taxes, fees, and levies that allow the State to strengthen its ability to promote progress in the communities.** In addition, each year we also invest close to 70 billion pesos in sustainability programs inspired by the UN Sustainable Development Goals.

All this to say that we are deeply grateful for your work and your dedication, which are the main contributions for our achievements. I would like to invite you to read this new issue and learn about the progress we have made. Continuing to mine with a positive impact is in our hands.

Drummond continues to be **the largest coal producer and exporter in Colombia**

For the sixth consecutive year, Drummond Ltd. is the country's largest coal producer and exporter. This achievement reflects the organization's great resilience and competitiveness, allowing it to achieve this goal even in the context of a global economy facing major challenges.

It gives us great pride to see how, with the dedicated work of a team of close to 5,100 employees and a similar number of contractors implementing the most modern techniques in large-scale open pit mining, we have managed to rank once again and for the sixth consecutive time as the number one coal producer and exporter in the country," stated Jose Miguel Linares, President of Drummond.

Excellent performance

Last year, Drummond produced

28,889,000
TONS

and exported

31,545.000
TONS,

6% more than in 2020. Projections for the future are also positive. We expect the company to attain between 30 and 31 million tons in 2022 for both production and exports.

These large figures for exports reflect the quality of Colombian coal, which is shipped to more than 21 countries around the world, with Turkey, Brazil, Chile, South Korea, Israel, and China being the most important destinations.

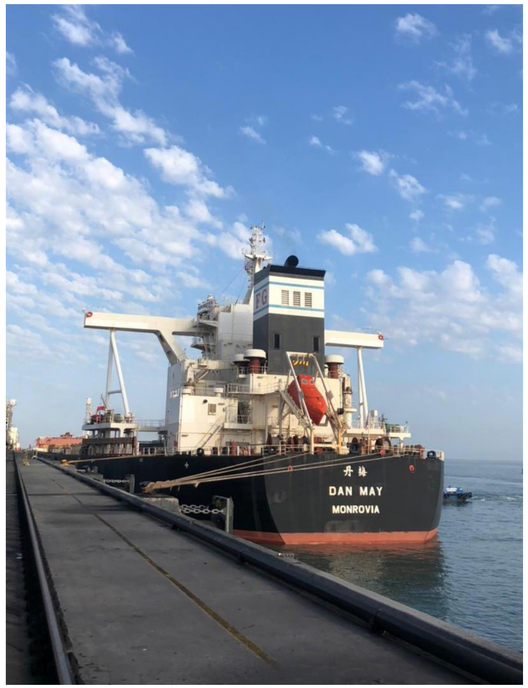

Drummond's main markets:

*In total, Drummond shipped coal to more than 21 countries. The regions of Asia, Eurasia, and the Middle East received 50.3% of its exports in the last 12 months.

This huge achievement reflects an open pit mining operation in line with the highest international standards and the best technology. It also reflects other fundamental aspects such as social and environmental management.

A record-breaking year

In 2021, not only was Drummond Ltd. the country's largest coal producer and exporter, but it also hit other milestones of great relevance. In the early months of the year, Drummond broke the record for the largest amount of coal loaded on a single ship.

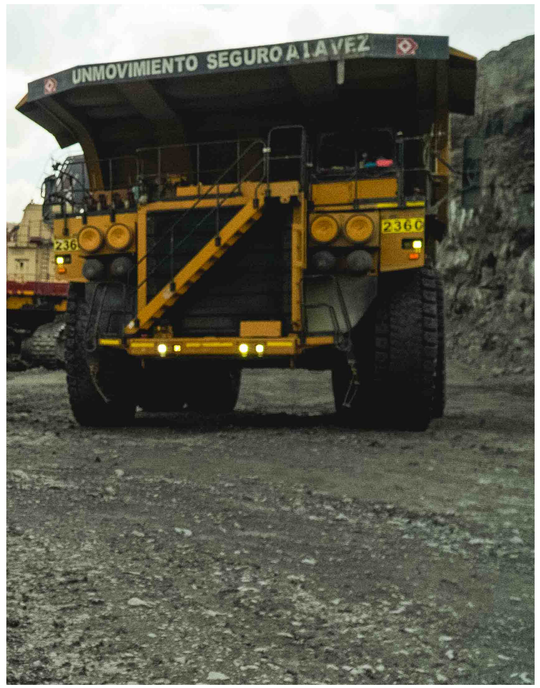

On the vessel Dan May we loaded

189,402

TONS OF COAL

–an amount never before achieved – headed to Turkey, one of the most important world markets that recognizes the quality of Colombian coal.

The same year, Drummond also began a new route to export coal to Dubai. The first shipment set sail in April with

164,257

tons on the vessel Fortune, which traveled **more than 8,900 nautical miles** before it arrived with its valuable cargo at its destination in the United Arab Emirates.

Despite the many challenges faced by the coal industry due to low prices in the international market and the global COVID-19 crisis, Drummond Ltd. has been able to maintain its position thanks to the efforts of its workers, the continual work by the sales team at the head office to market our production, and the biosafety measures adopted to prevent the spread of the virus.

Production with a social impact

The achievement of being the country's largest coal producer and exporter produces benefits not only for the company. Our organization's purpose, which includes comprehensive management of sustainability and corporate social responsibility, means this achievement also produces positive impacts in the area of influence and in the country in general.

Drummond Ltd. currently generates more than

10,000

DIRECT JOBS, close to

50,000

INDIRECT JOBS, AND SOCIAL INVESTMENT IN AN AMOUNT CLOSE TO

70,000

BILLION PESOS PER YEAR, INSPIRED BY THE UNITED NATION'S SUSTAINABLE DEVELOPMENT GOALS (SDGS).

The most recent opinion survey in Brujula Minera reported that Drummond's level of approval in Cesar went from

65%

IN 2018, TO

80%

IN 2021.

The company's impact reaches far beyond its areas of influence, largely due to its contributions in royalties, which are allocated to a variety of government programs that benefit many Colombians and focus on healthcare, education, basic sanitation infrastructure, and other rights.

"In 2021, the company contributed 368.2 million dollars in royalties and close to 238 million dollars in taxes, fees, and levies. Over the years (as at the close of 2021), Drummond has contributed 4.8 billion dollars in royalties and compensations, and 3.3 billion dollars in taxes fees and levies," stated Pablo Urrutia, Vice President of Public Affairs and Communications at Drummond.

The company's different social investment programs have been so important , that a profound level of trust has been developed with the communities in the area of influence, which is an achievement just as important as being the country's main coal producer and exporter.

In addition, 94% of those surveyed in Cesar and La Guajira agree that responsible mining brings development to the regions where it takes place, and 92% are in complete agreement that it is possible for mining to build a consensus with communities.

An environmentally-sustainable operation

These major achievements of the organization have also taken into account essential aspects such as the mitigation of environmental impact and the promotion of sustainability based on a corporate social responsibility strategy.

Not only did Drummond break the record for the largest coal shipment and rank first place for production and exports in the country, but it was also the company in the mining sector that made the greatest contribution to the national government's **#SembrarNosUne** program.

By the end of 2021, the company had planted more than

500
THOUSAND TREES
of native species in municipalities of Cesar such as La Jagua de Ibirico, El Paso, Becerril, Agustin Codazzi and Chiriguana, and in the port municipality of Cienaga in Magdalena.

According to the data from the **#SembrarNosUne** program led by the Ministry of the Environment and Sustainable Development, Drummond Ltd. is the number one company in the mining sector, and sixth in the nation, in terms of contributions to this initiative.

As part of this program, Drummond participated as a guest of the Ministry of the Environment in the great National Planting Marathon. The company and its partners- including Corpocesar, Corpamag, municipal mayors and the Army, along with schools, community associations, community action boards, and the general community in its area of influence – undertook a campaign to plant

20,960
TREES IN THE DEPARTMENTS OF CESAR AND MAGDALENA.
In addition, Drummond Ltd., Corpocesar, and the Office of the Mayor of La Jagua de Ibirico signed a conservation agreement with the community in La Esmeralda, Cesar for the San Antonio Creek Sub Basin Forest Compensation Project.

Signing this agreement will benefit more than

100
FAMILIES
and help conserve more than

400
HECTARES.

The goal of the program is to protect and restore in a sustainable way the region's ecosystem services, while promoting sustainable production practices that involve the local communities

The program builds social ties between those participating directly as environmental protectors and groups such as the community, as they build a vision for a shared territory. It promotes sustainable local development based on conservation actions aligned with monetary incentives and environmental education to achieve development, sustainable production, and support for road improvements and economic stability in rural areas.

In addition to this program, Drummond installed two new environmental monitoring stations, one of them located between the El Corozo mine and Rincon Hondo, in the municipality of Chiriguana, Cesar.

All of these activities reflect the company's purposes aligned with the Sustainable Development Goals, with a focus on environmental aspects such as Life on land (SDG 15) and Climate action (SDG 13).

Drummond: a giant with a future

The resources are there to continue conducting responsible mining in order to produce economic, social, and environmental benefits. At this point, Drummond has more than 1.2 billion tons of reserves in five mining concessions in the center of Cesar.

> **"If we add to that the reserves of other coal companies operating in the country, we can state that there will be a market for Colombian coal for at least another 30 years,"** added Urrutia.

In such a context, joint work with national, regional, and local authorities, and with the communities and civil society organizations, will be vital to plans for the sustainable development of the region and the country.

But the short-term challenges include some very important issues. One of them will be working with national and regional industry associations to guarantee that coal mining projects such as Drummond's continue to be considered essential to the economic development of the regions and of the country, through their continued designation as Projects of National and Strategic Interest, or PINES for the Spanish acronym.

Moreover, the prolonged cycle of low coal prices in 2020 and 2021 (confirming the cyclical behavior of the prices of raw materials) and price increases for goods and services, made cost management a challenge to be faced this and every year.

Many milestones, a single Drummond team

None of these achievements would be possible without our team of people who are passionate about their work, aware of the importance of their roles, and committed to working in a way that is environmentally sustainable and socially responsible.

> **"Our main message to our team is: thank you very much for your hard work, which has brought us this far and reaffirmed our pride in being miners. May 2022 also be a year full of achievements to celebrate, working safely and continuing with the biosafety measures that keep us safe and sound,"** concluded Linares.

2022: expansion of applied technology

Using digital tools for automation and the improvement of engineering processes has taken on a more important role at Drummond Ltd. The use of drones and GPS-driven technologies enhances continuous improvement processes in the operations.

With a view toward further improving processes and making them safer and more efficient, the idea was born of creating an applied technology group associated with the engineering area. This will optimize the response and planning capacity required by the work in Drummond Ltd.'s daily operations.

Drones: gathering data in the field

"We have determined that this technology can be applied by using drones to gather data in the field. This is the program that has made the greatest advances. We now have different equipment for gathering field data, aerial photographs, videos, and other types of information, eliminating the exposure of our surveyors to the conditions at the mine, and giving us a much greater capacity for gathering the information necessary for our engineering processes," stated Paul Klee, Engineering Manager.

In 2021, drone use in the operation permitted:

Drone project

Paul Klee.

Paul Klee -Proyecto dr...
Privacy policy

Machine control: breaking time barriers

In another application of technology, the Machine Control program was created, using high-precision GPS technology. This program will further facilitate the work of surveyors, thanks to the technology's great precision, speed, versatility, and productivity.

Paul Klee explained: **"Machine Control takes geolocation information using a GPS antenna, processes it with the installed equipment, and gives the operator real-time information on where machines are located with respect to the design lines produced by our planning process. That leads to much greater efficiency and safety for the operation, because the information is available to operators, supervisors, and planners 24 hours a day, permitting timely decisions that are much more accurate."**

"We are currently working with different suppliers to acquire this technology and do pilot tests, in addition to developing our own in-house solutions," he added.

Machine control

Paul Klee.

Investments in technology: long-term benefits and greater competitiveness for the organization

Currently, survey work done by people can only be done during the day. Drummond Ltd.'s operation is 24/7, and only shuts down three days during the entire year.

Based on this need, providing 24-hour support expands our capacity to execute our plans. Paul Klee indicated this as another of the benefits of this technology in addition to the safety benefits. "GPS Machine Control is available 24/7, during the entire time our operation is running."

Another advantage is that it is not directly dependent on changes in the weather. "When we have a rainstorm, it affects the operation, and we have to wait until the roads recover and the work fronts get up and running before the surveyors can access each machine and provide the information needed. That's not the case with Machine Control, because it is continuously available to the operation," emphasized Klee.

In summary

2021: a year of major records

Despite the difficulties produced by the pandemic in many industries and markets, the year 2021 closed with record figures for Drummond. Last year, we wrote a further chapter of our history, with figures worthy of recording:

El Corozo: **Drummond's new titan**

The new El Corozo project will be fundamental to guaranteeing the quality and quantity of the company's coal production in the coming years. This is a breakthrough that will strengthen Drummond's ability to compete and ensure the sustainability of the operation.

El Corozo is a large-scale mining contract joining two medium-sized coal mining contracts previously known as Rincon Hondo and Similoa.
The commencement of operations in this mining concession was great news for Drummond and for the country.

The area of the El Corozo contract is

16,397

HECTARES.
and is located in the municipalities of La Jagua de Ibirico and Chiriguana in the Department of Cesar. Operations began at the end of 2020, and in 2021 it produced more than

660,000

TONS OF COAL.

For 2022, this project is expected to produce more than

2.8

MILLION TONS OF COAL.

That is four times greater than production in 2021.

A titanic challenge

Before the start of operations at the El Corozo mine, the BE 2570 dragline located at the Pribbenow mine had to be transported there. The logistics were very complex for the move, based on the condition of the terrain and the size of the machine.

The equipment (with an 88 cubic-meter bucket capacity) weighs more than 5,000 tons. It took four days to move it from Pribbenow to El Corozo, covering a distance of just over 7 kilometers.

The roads had to be adapted prior to the relocation, due to the size and weight of the machinery, and the entire operation took place in accordance with necessary technical, logistical, and safety measures.

"Moving this equipment to the El Corozo mine will lead to efficient development and sustainability in terms of quantity and quality in the operation. Those two elements are essential to our competitiveness in the world market,", stated Jorge Hinojosa, Production Superintendent at Drummond Ltd.

In a world economy still affected by the pandemic, it is important for companies in all sectors to guarantee their level of productivity, because that is the indicator that will allow them to survive in more competitive markets.

El Corozo

Jorge Hinojosa.

SOUNDCLOUD

Privacy policy

Jorge Hinojosa.

Paul Klee.

"With El Corozo on line, we can stabilize and guarantee our production. With our current capacity and the reserves we have, we can ensure a stable production of between 30 and 31 million tons per year", stated Paul Klee, Engineering Manager at Drummond Ltd.

THE MACHINES AT EL COROZO

New project, new conditions

Inaugurating a new mining project always brings new lessons. The terrain is different, the topography changes, the geological conditions can be different, and there can even be some operational tasks that require taking certain precautions.

“There are diverse challenges at the level of planning at El Corozo. At our operations at the La Loma and El Descanso mines, we see coal seams with a slope of 15 degrees, while at El Corozo, we see slopes of 45 degrees”, added Engineer Klee.

“From the geological model we had already anticipated that we would find these specific conditions in this deposit. The main challenge is to adapt our operation to these new geological conditions”, he stated.

The challenges come with a reward, however, because the production from the El Corozo mine will stabilize the company’s production and allow it to continue to compete in the different markets.

“At El Corozo the coal seams have a steeper slope, and, without a doubt, that constitutes a major challenge. Some seams, nevertheless, offer a superior quality, which allows us to compete in international markets in which quality is essential,” added Hinojosa.

A responsible project

As part of its environmental commitment, Drummond Ltd. installed two new air quality monitoring stations in areas adjacent to the mining project, with the goal of safeguarding and protecting the health of neighboring communities.

The purpose of the stations is to monitor particulate matter emissions from the mining operations. To do that, automatic and autonomous measuring equipment obtains real-time data, measuring particulate matter every 10 minutes.

These two new stations are on top of the six already installed and strategically located around the company's mining operations and neighboring towns in the Department of Cesar.

The start of operations of El Corozo will generate benefits for the company and its team. The area of influence will also receive direct benefits derived from Drummond Ltd.'s corporate social responsibility strategy.

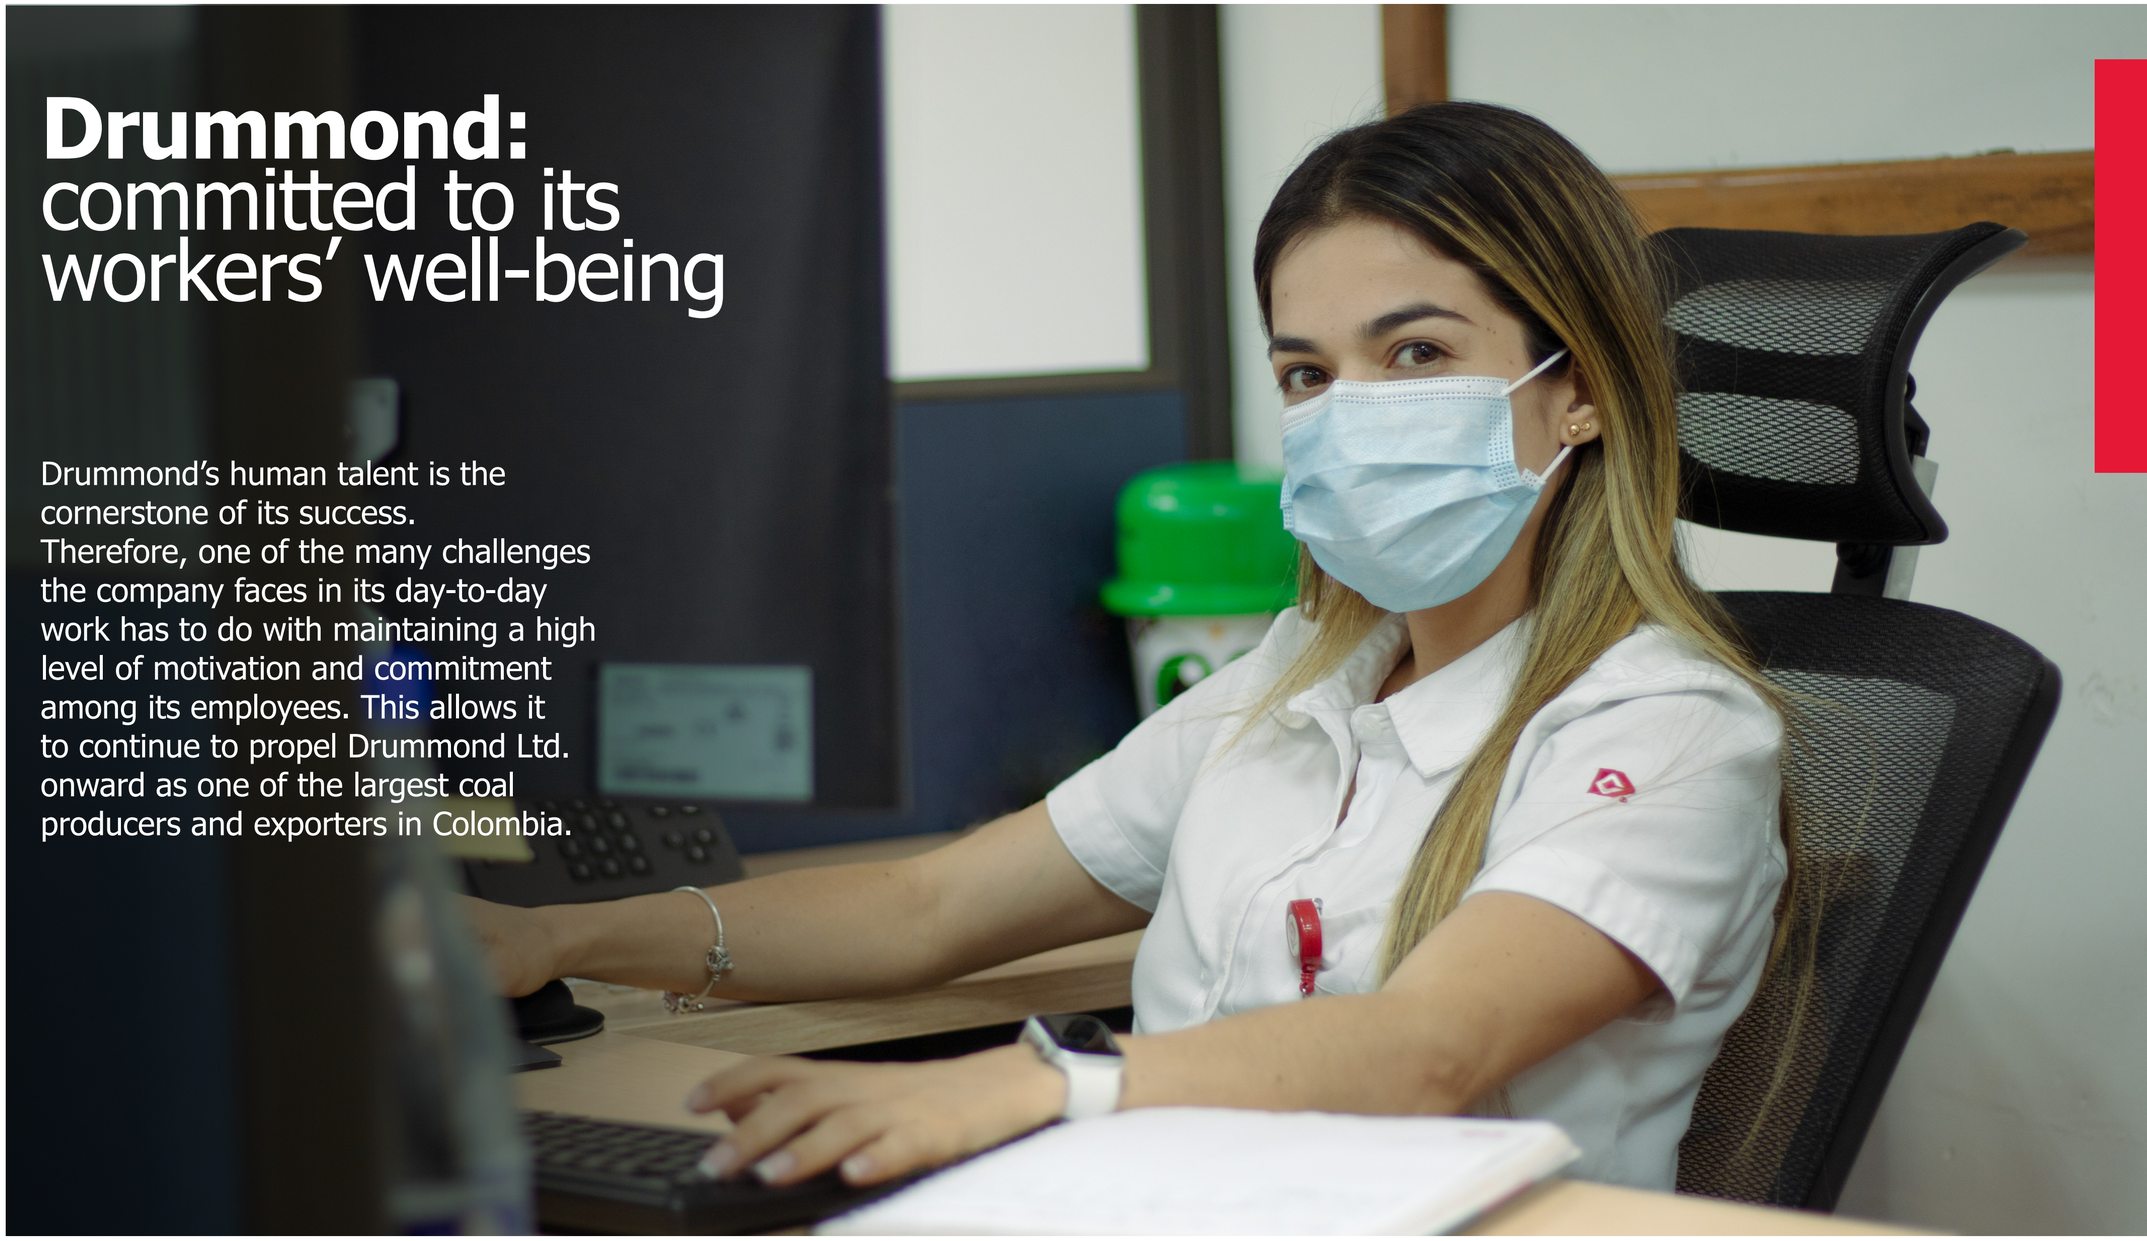

The integration of the Rincon Hondo and Similoa contracts (which gave rise to El Corozo) included a social investment clause for the communities of La Jagua de Ibirico and Chiriguana in the Department of Cesar and for Cienaga in the Department of Magdalena, including projects that will reduce poverty (contributing to meeting Sustainable Development Goal 1) and improve the quality of life of the people who live there.

The ANM and Drummond also agreed on the payment of an additional compensation in high price scenarios, thus increasing revenues for the Nation. The potential increase in coal production resulting from the integration of the contracts will also increase state revenue through royalties and compensations.

"These projects represent a great opportunity for safeguarding contributions to the national and regional economies. We have great expectations about what we can achieve with this new El Corozo contract," concluded Jorge Hinojosa.

Drummond: committed to its workers' well-being

Drummond's human talent is the cornerstone of its success. Therefore, one of the many challenges the company faces in its day-to-day work has to do with maintaining a high level of motivation and commitment among its employees. This allows it to continue to propel Drummond Ltd. onward as one of the largest coal producers and exporters in Colombia.

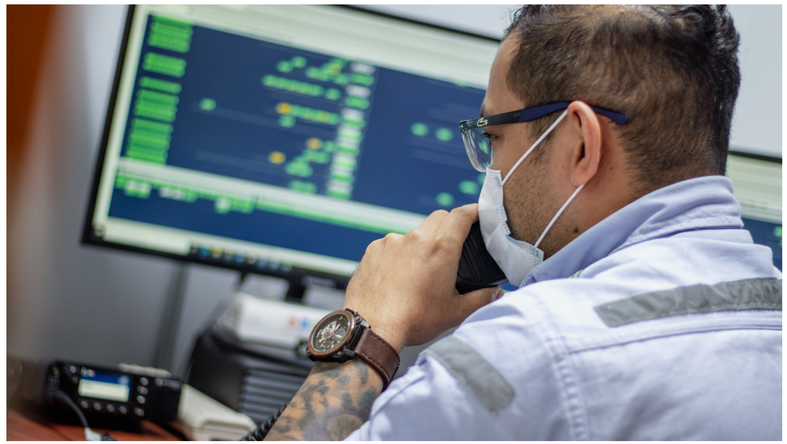

In response to this challenge, the company has made major efforts from the start of its operations to develop a complete package of benefits that, combined with highly competitive remuneration, improves the quality of life of employees and their families.

Maintaining the competitive level established by the company requires a significant investment to finance programs in the area of health, education, savings, transportation, food service, home loans, and bonuses (in June, December, and vacations). These are just a few examples of the company's benefits that promote the personal and professional development of the more than

5,100

WORKERS INVOLVED IN THE PROJECT.

That said, the company intends the impact of its compensation strategy to reach beyond its workers; some programs also cover the immediate family. The complementary healthcare plan, for example, covers more than

18,200

PEOPLE
(including employees and their family members).

The company covers **100%** of the cost of this benefit, providing access to general medical services, some specialties, medication, emergency and hospitalization services, and others.

The education program, in turn, provides grants for students, supporting every level of education for employees and their children, including preschool, elementary, high school, and higher education.

Last year, the company provided school and college grants to more than

7,500 children

and, since the creation of the program, has allowed

540

EMPLOYEES
to receive ongoing development through higher education.

Another two benefits that help build family assets are the company savings plan and home loans. The first one makes it possible for an employee to save up to 10% of his or her base salary, and the company will then contribute 30%, with a view toward building a culture of savings for the medium and long-term. This financial instrument also contributes to tax efficiency for employees.

Currently more than

2,100

EMPLOYEES
make use of this benefit.

Home loans, in turn, are made with favorable rates and terms, so that employees can own their own homes, restructure their current mortgage or make home improvements.

The fund has helped more than

2,500

EMPLOYEES AND THEIR FAMILIES
fulfill their dream of owning their own home.

To facilitate access to these benefits, the company has set up a specialized team to provide necessary guidance and to respond in a timely manner to the needs of workers or their families. The team is available to help using different in-person and digital channels (email, and WhatsApp).

Even in moments of the greatest complexity, such as those experienced during the pandemic and the economic uncertainty caused by international coal prices, Drummond Ltd. has maintained its extralegal benefits, confirming over the years its conviction regarding and commitment to establishing mechanisms that promote the well-being of its employees and their families, and of the community in general.

The primary goal of the mentioned benefits, and others that form comprise the portfolio, is to have a positive impact on workers.

Drummond, a COVID-19 success story

COVID-19 Actions

After two years of pandemic, Drummond continues to keep its biosafety measures in place, and continues to facilitate vaccinations and boosters for its employees and their families, resulting in a healthy environment that mitigates occupational risks.

Avoiding enclosed spaces, washing hands, social distancing, and using facemasks are measures still in place in the company's daily work, because they have proved to be the foundation of a successful on-the-job self-care campaign.

Drummond has seen this success not only in the few active cases of COVID-19 reported, but also in reductions in other illnesses.

"Reports of influenza, as we call it in epidemiological surveillance, and other viruses that produce respiratory symptoms have been very low, thanks to measures such as wearing face masks, handwashing, and social distancing," stated Dr. Alfonso Campo, Drummond's Medical Epidemiologist..

From the start, the company gave the pandemic its necessary importance by creating a committee of experts in a variety of disciplines, in order to determine and establish the measures needed.

According to Dr. Jorge Rivera, Medical Director at the Pribbenow mine, the committee evaluates all the measures. "The entire group- made up of specialists in occupational health and safety, epidemiologists, and external legal and administrative advisors- has analyzed how to implement each of the measures."

Dr. Jorge Rivera

Vaccination, key to success

Drummond apoyó desde el inicio el Plan Nacional de Vacunación promovido por el Gobierno nacional para facilitar el acceso a vacunas de sus empleados, familiares, proveedores y contratistas. Subsequently, through the government, the company bought

9,000 doses

that permitted another

4,500 people

to gain access to the initial doses. This has allowed the great majority of Drummond's team and their families to stay up-to-date with their vaccinations.

The work to vaccinate is not over, however, and logistical support remains in place for administering boosters. As Dr. Rivera commented,

"Since January, health providers and nearby hospitals have been administering booster shots. By the end of February, we had administered close to

1,500

boosters."

"Drummond spares no effort supporting public health policies and, in this case, the national vaccination plan," he added.

Dr. Alfonso Campo

"At Drummond the percentage of our vaccinated workers is higher than the national average. Between 90 and 91% of our people are vaccinated. If we lived with our families and were like a nation, the virus would have already been declared endemic among us," added Dr. Campo.

Prevention, a daily task

Some company employees have always used a facemask as one of the basic requirements for the job, mainly those who, despite working out in the open, may be exposed to particulate matter.

But at an operation like Drummond's, it takes more than these basic biosafety measures to keep the team healthy. So prevention was established as a key part of the entire operation.

For a better future for everyone

Two years after the start of the pandemic, measures remain in place at Drummond's operations, because their effectiveness has been demonstrated in terms of lowering the number of cases and reducing the speed at which infections spread.

Nevertheless, there is still work to be done. Not everyone in the areas of influence has been vaccinated. That represents a risk with an eye toward the future. Dr. Campo explained,

"The most important thing now is for us to encourage the unvaccinated to get vaccinated. Variants continue to arise due to people who aren't vaccinated, because they carry the virus and allow it to circulate and mutate unhindered."

A vaccination rate greater than 90% is, undoubtedly, an achievement to celebrate.

But we need to strengthen that achievement even further by following biosafety measures and adapting to the new normality brought in by the pandemic.

Creating a specialized committee, defining biosafety measures, installing equipment to measure temperatures, providing logistical support for government vaccination plans, and purchasing vaccines to complement coverage and include families, contractors, and suppliers, all demonstrate the importance the company gives to its human talent.

"The company has allocated significant resources to place value on life. It's not just about keeping the company going. Drummond, as a family company, takes care of all of its family members. It's a company that respects life and promotes best practices," concluded Dr. Rivera.

Between Euterpe and Soteira: the story of a vallenato composer

In addition to being a Shovel Production Supervisor at Drummond, Neil Pertuz has great talent for musical composition. He has written more than one hundred songs, several of them interpreted by well-known Colombian artists.

Neil Pertuz (Yo soy seguro).

Singers such as Peter Manjarres and Luifer Cuello, and groups such as Grupo Kvrass and Los Diablitos, have sung several of his compositions. He has even won prizes, such as one in the Maestro category at the Francisco El Hombre Vallenato Song Festival.

The song **'Yo soy seguro' (I am safe)**, composed by Pertuz for the entire team at Drummond, invitates everyone to stay safe on the job. It arose as an opportunity to demonstrate that music can be used as a tool for education.

"If you have someone read about safety, they'll quickly get tired of reading. If you show them a video about safety, they might pay attention for one or two minutes. But music has great power to teach," stated Pertuz.

His intention with this song was to communicate a message of prevention for everyone who works at Drummond's operations, something they could hear during their shift and learn from.

"We have to act safely in everything we do, at work and at home. At Drummond, safety is a lifestyle, so I wanted to indicate all of that with the song," he added.

It's a very catchy tune, and that's not by chance. Neil Pertuz used a basic melody, with features similar to a nursery rhyme, so that anyone can learn it quickly.

"In commercial jingles, the melody is not always easy to learn. In this case, I gave the chorus a bit of a feel of a nursery rhyme. Children's songs are very catchy. It's music that is very easy to understand, and the melodies are simple," he said.

Between the muse and the goddess

Composing a song can be complex, but everything is easier if your muse appears. Pertuz explained, “Composition is a constant learning process. When your muse shows up and inspires you, everything flows, and you can write. There are songs I have written in 15 or 20 minutes.”

“With this song it was different,” he stated. It took me about three months to write it, because I wanted to take advantage of all the training I’ve received at the company. I would write random phrases down over a period of time, and then I had to tie it all together, make it rhyme, and create an easy melody.”

Neil Pertuz

Muses have been important throughout the history of humanity. For the ancient Greeks, Euterpe (one of Zeus’ daughters in Greek mythology) was the muse of music. And Soteira was the goddess of protection or safety, whom the Romans then called Securitas.

In the case of the song ‘Yo soy seguro,’ music and safety blend into a vallenato song that issues an invitation to stay safe because it is important to return home safe and sound.

“I wanted to write a song that could be heard at the mine, summarizing everything I’ve learned in regular training, and put it all into a melody to help people internalize the message more easily,” concluded Pertuz.

Coro de la canción Yo soy seguro:

Yo, yo, yo, yo soy seguro
yo vivo en la juega
me cuido mucho mi familia
a mí me espera
Yo, yo, yo, yo amo a mi Drummond
amo a su gente
seamos seguros

Translation:

I, I, I, I stay safe
I keep my head in the game
I’m very careful
My family is waiting for me
I, I, I, I love my Drummond
I love its people
Let’s stay safe

Other songs by Neil Pertuz:

- Me llevas al cielo (Peter Manjarrés)
- Mil gracias por amarme (Peter Manjarrés)
- No sé tú (Churo Díaz)
- Dile a tu papá (Luifer Cuello)
- Me quedo encuero (Grupo Kvrass)
- Rico estar enamorado (Miguel Morales)
- El vende pan (Elkin Uribe)
- Me enseñaste (Los Diablitos)
